## NanaZip Activation Code With Keygen Download

The app lets users add a customized macro to the open file menu. Keyboard shortcuts are great, but after a while, it can get a bit tiresome to have to press many keys to open the file menu. To alleviate the issue, NanaZip Product Key introduces the Keymacro feature that allows users to add custom file and folders to the open file menu. Create a new folder with a keyboard shortcut To create a custom keyboard shortcut, NanaZip Torrent Download requires users to simply add a line of code to the app's registry file. Having said that, you may also be wondering how exactly to code that. Don't worry, all you need to do is place the commands in an ordered manner as shown in the screenshot below. Creating a new keyboard shortcut on the desktop Let's assume that we want to create a shortcut for the desktop. To do so, we'll add a line of code to the registry file located at

HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\NanaApps\NanaKey\DesktopShortcut. Creating a new keyboard shortcut for the desktop Next, we have to define the exact path where the shortcut will reside, so we need to add our shortcut to the registry key by replacing the existing line with the following:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\NanaApps\NanaKey\DesktopShortcut] "ImagePath"="%APPDATA%\NanaApps\NanaKey\ana.ico" "Description"="This is the shortcut for your desktop"
```

Now that we've created the custom keyboard shortcut, users need to reboot the computer to see the change in effect. However, this is not a necessary step. Once the app has been restarted, users can start typing the shortcut and the resulting path will appear in the left pane. Add a new shortcut to the file menu To add a new keyboard shortcut to the open file menu, users need to modify the aforementioned registry line. This time, however, we'll add a new line for the command key and place it directly underneath the existing line. The complete registry line is the one below.

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\NanaApps\NanaKey\NanaFileMenu] "ImagePath"="%APPDATA%\NanaApps\NanaKey\2edc1e01e8
```
