When found, it begins to download and install itself, thus installing and executing the virus. You might want to get a backup of important files before you install Norton Security. After you installed Norton Security and activated it, it will start the "Norton Botkiller" virus on your system. The infected system cannot be fixed unless you reinstall the OS or perform a data wipe. Activate key is available for use on any Windows, Mac and Linux operating systems, which includes Windows 8/8.1/10, Windows 7, Windows XP and Windows Vista. Installation of the activated Windows is fully supported by Microsoft.
